- Assignment (Final)

Chapter 4: Information Gathering

- Information gathering about/from Organization
 - ↳ System Requirements & Human Needs
 - ↳ System Information
 - ↳ 3 Methods [Human Information Gathering]
 - ① Interview
 - ② JAD: Joint Application Design [will be explained]
 - ③ Questionnaires
 - ↳ (Pros & Cons)

What is interviewing?

- ↳ Interviewer & Interviewee
- ↳ Definition

Important method for

- collecting data on human & system information requirements

Reveals

- feelings, opinions of interviewee
- project goals

①

Interview Preparation

Shayan

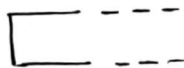

- ① Reading background material
- ② Establishing interview objectives → উদ্দেশ্য
- ③ Deciding whom to interview → (interview knowing the 'ব্যক্তি')
- ④ Preparing the interviewee → (letting them know date/time/topic)
- ⑤ Deciding on question types & structure

Question Types

- ① Open Ended
- ② Close Ended ⇒ 2 main types
- ③ Probes ⇒ follow up question

Open Ended

- ↳ Descriptive
- ↳ No limit in response

- ↳ It's up to the interviewee
- ↳ অনেক আধুনি বিভিন্ন answer দিতে পারবে

Close Ended

- ↳ Limited response
- ↳ Short answer
- ↳ Response limited by interviewer

When?

Broad or in-depth
knowledge expected from
interviewee

When?

Characteristic?

- ↳ Limited open-ended

Characteristic?

- ↳ Reveals opinions
of the interviewee

Pro: More info, easy for interviewee

Con: Limited time, possibly losing
control of interview

Pro: Gather precise &
Reliable information

Con: Interrogation type

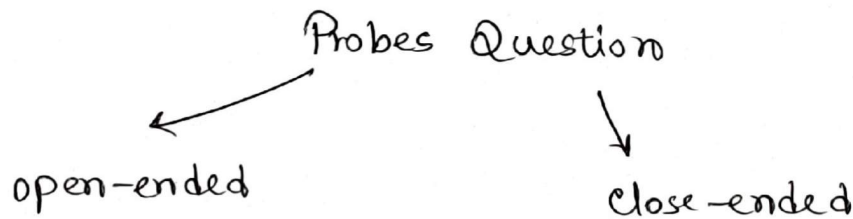

2

Bi-polar Questions (Closed Question)

Bi-polar : yes, no | agree, disagree | true, false

Probes Question - 3rd type of question

- ① Used as a follow-up question
- ② Strongest probe → "Why?"
- ③ Elicit more detail about previous question
- ④ Purpose:
 - ① To get more meaning
 - ② To clarify
 - ③ To draw out & expand on interviewee's point

Question Order

Questionnaire Structure

- ① ~~Pyramid~~ Pyramid : closed → open
- ② Funnel : open → closed
- ③ Diamond : mix (open | closed)
 - ↳ closed → open → closed → open → ...

When to use Pyramid?

- warm up interviewee
- grab interviewee's interest

When to use Funnel?

- Interviewee's are emotionally connected with the topic

When to use Diamond?

- The topic is very complex

example PDF

Question Order

Question Structure

- 1) Pyramid : close → open
 - 2) Funnel : open → close
 - 3) Diamond : mix (open / close)
- close → open → close → open

Chapter 4

② JAD (Joint Application Design)

↳ X 1:1 conversation

↳ ✓ Team conversation

↳ Team শিথিল information gathering

↳ Discussion Session

□ Who is involved?

↳ Executive sponsor

↳ Information System Analyst

↳ Users

↳ Session leader → [lead/host the session]

↳ Observers → anchor

↳ Scribe [VIP] [doesn't actively participate in the meeting]

↳ [Meeting notes/issues]

□ Conditions that support the use of JAD

① Users are restless & want something new

② Organizational culture supports joint problem solving behavior

③ Analysts forecast an increase in the number of ideas using JAD

④ Personnel may be absent from their jobs for the length of the time required.

JAD session → 1-3 hrs

Employee → specific amount of time outside work
(regular কাজ বাড়ি দিই)

①

Where to hold JAD Meetings?

Pros & Cons of JAD

Benefits

- ① Short time
- ② Creative ideas
- ③ Rapid development of system
- ④ Improved user ownership of system

Drawbacks

- ① সবাইকে একসাথে পাওয়া যাবে না
- ② Scribe error হলে follow up report will be incomplete and JAD session will fail
- ③ Cultural support lacking

③ Questionnaires

- > useful in gathering user feedback
- a set of questions is used to gather the information system & users.

Planning for the Use of Questionnaires

- ↳ organization members are widely dispersed
- ↳ Many members are involved with the project
- ↳ Exploratory work is needed
- ↳ Problem solving prior to interviews is necessary.

Questionnaire Language

- ① Simple
- ② Specific
- ③ Short
- ④ Not patronizing
- ⑤ Free of bias
- ⑥ Addressed to those who are knowledgeable
- ⑦ Technically accurate
- ⑧ Appropriate for the reading level of the respondent

Measurement of Scale

- ① Nominal scale
- ② Interval scale > difference

Nominal scale → categorizing
 → order independent
 while categorizing
 → weakest form of measurement

Interval Scale → rating based

→ no absolute zero

○	○	●	○	○
1	2	3	4	5

NOT Good

Great

→ Order matters

→ समान interval है

Problems with scales

① Leniency → caused by easy raters

② Central Tendency

③ Halo Effect
